

Trust guaranteed!

Fast and easy to 100% control

Contract manufacturers and packers have a special responsibility for the security of production. Even for very small batch sizes, they have to meet the individual production and packaging specifications of their customers with maximum reliability.

The udaFORMAXX offline solution has proven its worth particularly in contract. This system ensures operating processes reliable, independent and individual. Packaging is separated, marked, controlled and – if required – filtered out.

It does not matter whether the client belongs to pharmaceutical, cosmetics, food, electronics or printing industry. The customer expects with full confidence that his orders will be carried out reliably and accurately. Because for every customer his own product is of course the most important thing.

In order to further enhance both safety and sustainability in the field of packaging, existing process chains are increasingly being equipped with efficient coding and serialization solutions.

2 million containers a day

Rommelag, founded in 1952, is the inventor of blow-fill-seal technology (BFS) and the global market leader in the aseptic filling of liquids and semisolids.

„The goal was a fully automated solution for serialization process and 100% accurate print inspection.“

*Rainer Fräder,
Senior Manager Packaging Development*

As a trusted partner of the Rommelag Group, Holopack Verpackungstechnik GmbH as Rommelag CMO is responsible for contract manufacturing and packaging of customer products.

More than 2 million containers a day are being filled for customers all over the world.

01 Extending the proven

For many years, Rommelag CMO has been coding flat folding boxes just-in-time with the udaFORMAXX. Its reliability at the **highest production speeds** continues to be exploited.

The requirements to the required serialization process are **100% fulfilled** by the inspection solution of the Swiss company **QualiVision AG**.

The focus is also on topics such as error logging, statistical evaluation and changes of tolerance values by authorized employees in an easy way.

02 Standard

QualiReader enables simultaneous control of printer and camera. This offers administration of the entire production process via one single interface.

The software contains an integrated job and article management, which fulfills the **traceability** and **reporting requirements** of the **pharmaceutical industry**.

Moreover the system manage the **automatic logging** as well as the reject of bad products through the eject station.

The additional **balancing stations** ensure traceability and data verification throughout.

03 Added value

Highest production reliability in many industries – even without complexity. Both, the udaFORMAXX and the automatic printing and inspection solution from QualiVision score with minimum set-up effort. The central interface for the entire coding and serialization process, the audit trail and the configurable user level increases **production quality and quantity**.

Quality data is securely logged and provided via reports.

The customer will grateful and continues to stand behind you with complete confidence and trust.

Rainer Fräder,

Senior Manager Packaging Development

„We are convinced by the easy operation via a single user interface for the entire coding and inspection process. Reading in the print data via a hand scanner simplifies our production process enormously.

Rommelag CMO is thus ideally equipped to meet the requirements of the EU FDM and US FD DSCSA. Ready for Track & Trace since 11/2018.“

udaFORMAXX – Offline-Solution

With its own stack-to-stack processing: ideal for flexibly and precisely just-in-time printing of variable data outside of the production line for small and medium batch sizes.

Can be combined with various coding and camera systems to meet the diverse requirements of all industries.
