KOENIG & BAUER

Touch-Free Marking In The Colour Of Your Choice

Custom Ink Development

Coding & Marking in Practice

Koenig & Bauer Coding has been developing and producing coding solutions in Germany for more than 50 years. First-class quality, outstanding performance and unconditional practical orientation are our focus. The systems we supply provide reliable marking with maximum uptime and an excellent price-performance ratio.
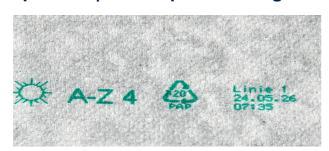

we're on it.

KOENIG & BAUER

alphaJET | Marking of Paper / Fleece

Consumables for household appliances must be clearly identifiable and assignable even outside the packaging. This avoids errors in use and simplifies the subsequent repurchase of the product. Especially in the case of dust allergies, the use of dust bags is an important point for hygienic disposal.

International manufacturers of hoovers rely on the dependability of alphaJET non-contact coding systems for marking original hoover bags. The inkjet printers of the alphaJET5 series are easy to operate and economical in consumption. Perfect matching of the printer and the ink used ensure the very best output, even at high production speeds.

alphaJET | Ink Corporate Design Compliant

For companies, a logo or trademark represents the corporate identity (CI) and is of great importance for recognition. The logo is considered the key to the brand. In addition to text and form, use of colour makes a significant contribution to memorable representation.

Thanks to its considerable ink expertise, Koenig & Bauer Coding individually developed a pigmented special ink for a well-known company in a CI-compliant special colour at the beginning of 2022. This ink is approved for use in the alphaJET5 HS-M inkjet printer.
